

UK RAVE INFLATABLES

List of Surfaces Cubes Can be Set Up on

We want everyone to enjoy your party and cube, and to remember the event for all the right reasons, so it is important it is set up properly and safely. To help with your hire the following list covers the main surfaces you can set up and enjoy your Rave Cube hire on.

It is not exhaustive and please bear in mind that any surfaces with sharp edges may damage the Cube and you are liable for any damage caused to the cube during hire.

Please Note

- Any uneven surfaces could cause injury to people.
- Cubes cannot be set up on steep inclines due to potential injury and/ or the Cube being more susceptible to winds and moving.
- Remember we need at least a foot clearance around the Cube for set up and take down, as well as limiting damage to it.
- If winds are higher than 24mph we cannot set up the Cube due to potential gusts.
- We carry out a risk assessment before any set up for everyone's safety so please advise us in advance if you think there are any potential issues or hazards as we do reserve the right not to set up the cube if we believe it could cause injury or be damaged.

As always, just get in touch with us if you have any questions before booking, as we can advise from photos on surfaces and if need be, will visit prior to hire if we believe there is a potential issue to avoid disappointment on the day.

Thanks in advance for your understanding and co-operation.
